

Procedures for Importing Soil Test Data

1. To import a soil test from a lab, navigate to: Soil Tests > Imports From Lab

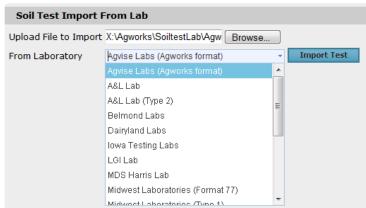

- 2. Click on the Browse... button to locate the file on your computer
- 3. Once you have located the file, click on it once to highlight it and then click on Open

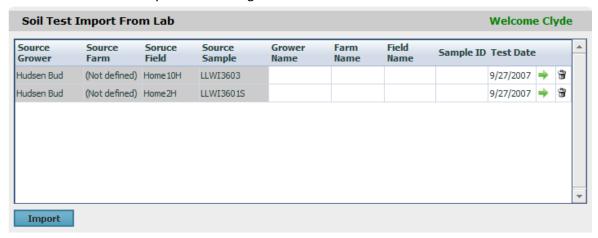

4. Select the appropriate Lab from the drop down list and then click on Import Test

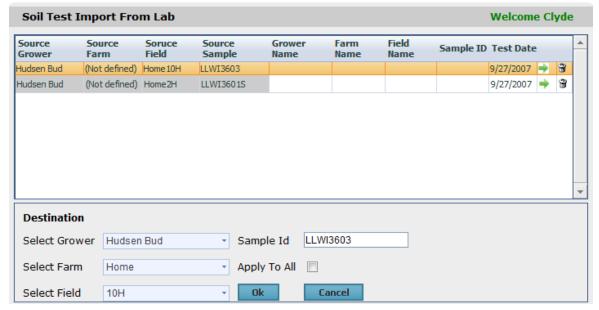

5. When the file has imported successfully, the following screen will appear. Within this screen, click on the button at the end of the first row to begin matching the data in the import file with the data that already exists in the AgWorks database.

6. Within the **Destination** section, complete the following as necessary:

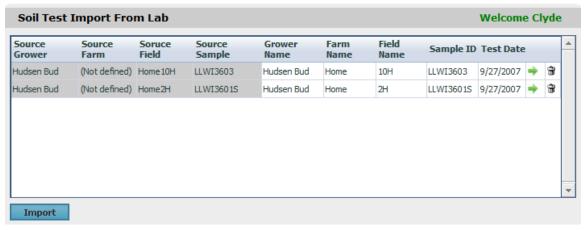

- a. Select Grower, using the drop down list
- b. Select Farm, using the drop down list
- c. Select **Field**, using the drop down list
- d. Enter the Sample ID
- e. If the records in the import file are all for the same Grower, Farm, and Field, then you can click **Apply to All** and the system will match the records for the remaining items in your file. If not, leave it un-checked.

When selecting your Grower, Farm, and Field, you can also type in each drop down list to allow you to reach your preferred item faster.

- 7. When you have matched your import record with the correct destination data already in the database, click on the button.
- 8. When you have matched all of your records, click on the **Import** button.

9. When you are finished you should see a screen similar to the one below.
